DAHLIAS FOR 1945

GREETINGS TO OUR DAHLIA FRIENDS AND CUSTOMERS

DAHLIA A DAY
12 DOLLS A DOZEN
★ FEB 19 1945 ★
U. S. Department of Agriculture

We take great pleasure in handing you our dahlia price list for 1945. The past season has been a trying one for florists, due to both war and weather conditions. However, last fall we harvested a nice crop of roots and the mid-winter check up proves that they are keeping excellently. We suggest that you get your orders in early as there is most always a scarcity of certain varieties. The first five on the list are new 1945 introductions, one of which is our own.

	Roots	Plants
(FD) BEAUTIFUL LADY, This is our own origination. Bright lemon yellow, 8-10 inch blooms on good stems, bush 5-6 feet tall. Rugged grower, insect resistant foliage, profuse and early. A good root maker and they keep well. Scored 84 at East Lansing. On Pacific Honor roll. It is one that will be pointed out in the garden.-----	\$10.00	\$3.50
JOAN FERENZ, ID, Blend of chrome yellow and flush of spinal pink. 11-12 inch blooms on good stems. Achievement winner at the New York Show 1944. Profuse bloomer, dark insect resistant foliage. Plants 5 feet tall. Highly recommended to us.-----	6.00	
ESSIE SMITH, SC, Amaranth pink, 12 inch blooms on good stems, bush 5-6 feet tall. Won American Home Achievement medal at Pittsburgh, Pa. and Wellsville Ohio. On all three honor rolls, FAITHFUL, SC. Pure white. 9-10 inch blooms on good stems, bush 5 feet tall. On Mid West Honor Roll. Dahliadel claims it to be the best pure white and the most dependable semi-cactus they have ever grown. Recommended to us.-----	5.00	
ROCKLEY ORANGE, SC. Brilliant orange flame, 6-7 inch blooms on cane like stems, bush 6 feet tall. On two Honor Rolls. Scored 85 at Storrs. A good keeper when cut. We saw this one growing in the originators garden and liked it.-----	5.00

Lynn Fontanne, ID, or SC, Scarlet. 10 in. blooms. Outstanding-----	1.00
Links Blue Triumph, FD, Violet mauve. Beautiful. 10 inch blooms -----	.75

the first time in the history of the world that the United States has been compelled to go to war against a country which had not even declared war upon us. This is a very serious situation, and it is one that we must all be prepared to meet. We must be ready to defend our country, and we must be ready to fight for our freedom and our way of life.

The Japanese have shown that they are willing to do whatever it takes to win the war. They have shown that they are willing to sacrifice anything to win the war. They have shown that they are willing to do whatever it takes to win the war. They have shown that they are willing to sacrifice anything to win the war.

Orders of \$1.50 or more postpaid. For orders of less than \$1.50 please include 15¢ extra for postage and packing.

Roots to be mailed April 10th to June 1st. Plants, May 15th to June 15th.

If you live in West Virginia kindly include Consumers Sales Tax with your order.

Our gardens have been Federal and Sta to inspected, and have been found appa rently free of da ngerously injurious insects and plant diseasos.

We guarantee all stock to be true to na me to the extent of replacement next year. Not responsible for more than the purchase price.

the same time, the number of species of plants and animals in the world is increasing rapidly. This is due to the fact that man is continually introducing new species into the environment, either accidentally or deliberately. For example, the introduction of the brown tree snake into the Pacific Islands has led to the extinction of many native bird species. Similarly, the introduction of the cane toad into Australia has led to the extinction of many native frog species. These examples illustrate the point that the introduction of non-native species can have serious ecological consequences.

Conclusion

In conclusion, the introduction of non-native species into an ecosystem can have both positive and negative effects. It is important to understand the potential impacts of such introductions and to take steps to minimize any negative effects. By doing so, we can help to ensure the long-term health and stability of our planet's ecosystems.

Non-native species can have both positive and negative impacts on ecosystems. While some introductions may lead to increased biodiversity and improved ecosystem functioning, others can result in the displacement of native species and the disruption of ecosystem processes. It is therefore crucial to carefully evaluate the potential impacts of any proposed introduction and to take steps to mitigate any negative effects.
